The ACCAP webinar series includes Climate Outlook Briefings every month and Alaska specific topics that may be of interest to the region. More info [here](#). People can get on the mailing list and be notified about upcoming webinars, or check the calendar [here](#). Also, all the webinars are recorded and posted online so they can be viewed even if the timing doesn't work for the live feed.

I post a lot of Alaska climate monitoring info, including ocean and sea ice info on Twitter under @AlaskaWx. There is a stash of these graphics on the ACCAP website [Front page](#) under "Visuals" tab

SNAP tools website snap.uaf.edu/tools is a great idea, as well as the fact that we'll have the videos from the AKTRLN/SNAP collaboration up on the TRLN website's resource page at some time in the near future at <https://akcasc.org/learning-network-resources/>

We are also publishing the IARC MOOC next week! That'll be found at <https://www.edx.org/course/climate-change-in-arctic-environments> and will be free. The videos in the course will be downloadable as well, which could be a useful resource for teachers with less-than-ideal internet access.

The one question I had was about boats being near whales and the potential that they were being harassed or unsafe. Attached are two flyers that NOAA has for boating near whales, gives tips for boating near whales and how to report violations. The pdfs can be shared virtually or printed out. I can also provide hard copies of the flyers or other materials if that would be helpful for posting in harbors or other community areas.

I also wanted to let CCF participants, if they don't know already about the America the Beautiful initiative (30 by 30 Executive Order) and that the public comment period is open till December 28th, 2021. I think it would be great if folks could speak towards how Federal government should handle conservation management of 30% of lands and waters by 2030.

People can learn more here [Conserving and Restoring America the Beautiful | National Oceanic and Atmospheric Administration \(noaa.gov\)](https://www.noaa.gov/conservation/restoration).

Someone brought up <https://skipperscience.org/> and that's a ISN offshoot and collab between SNP and Salmon State that we started this Summer where fishermen can collect and report biological and physical observations. They can also contact Lauren or I about that too.
